Write Up FOR ADDING A PRODUCT TO DATABASE USING HYBERNATE

1. Configure Eclipse with hibernate frame work

2. Create a maven project select archetype

3. Provide a group ID, Artifact id, Version of your project

4. Setup dependencies using pom.xml

5. Create a hibernate.cfg.xml in src/main/java

6. Provide all the nessesary details like db uri,username,password etc.

7 . Write code for persist class create getters and setters

8. Now create a DAO servlet which creates session factory and load configuration .

9. session factory will also create a a session for the object to interact with db.

10. Bind the details retrived from index.htm to session object

11. the session object will commit those transcation using jdbc frame work.

12. The hibernate will automatically map and create the table and handle CURD opreation without a piece of sql code.
